Universitat de les Illes Balears

Teaching guide

Academic year	2016-17
Subject	11008 - Non Equilibrium Collective Phenomena
Group	Group 1, 2S
Teaching guide	A
Language	English

Subject identification

Subject	11008 - Non Equilibrium Collective Phenomena
Credits	0.75 de presencials (18.75 hours) 2.25 de no presencials (56.25 hours) 3 de totals (75 hours).
Group	Group 1, 2S
Teaching period	Second semester
Teaching language	English

Professors

Lecturers	**Horari d'atenció als alumnes**					
	Starting time	**Finishing time**	**Day**	**Start date**	**Finish date**	**Office**
Cristóbal López Sánchez	You need to book a date with the professor in order to attend a tutorial.					

Contextualisation

This is one of the courses of the Specific Module of the master of Physics of Complex Systems.

Requirements

Recommendable

The concepts and methods needed have been previously acquired in the courses of the Structural Module of the master, in particular in *Cooperative and Critical Phenomena: applications*.

Skills

Specific

* E4: To understand the critical and cooperative phenomena from the perspective of cross-disciplinary physics and complex systems..
* E5: To understand the meaning of concepts like scaling laws, and to apply the techniques of the renormalization group..
* E7: To know the main concepts of non equilibrium statistical physics, including reticular models and growth..

Generic

* TG2: To acquire the capability to develop a research plan covering from the bibliographic research and strategy to the conclusions..

Date of publication: 15/07/2016

* TG3: To be able to write in a clear and precise way the different steps of the research work and to present the results to an expert audience..
* TG6: To develop the capability to understand and to apply knowledge of high perfomance computation and advanced numerical methods to the field of complex systems..

Basic

* You may consult the basic competencies students will have to achieve by the end of the Master's degree at the following address: http://estudis.uib.cat/master/comp_basiques/

Content

Theme content

Chapter 1.. Introduction: stochastic many particle systems.

Chapter 2.. The dynamics of phase transitions.

Chapter 3.. Absorbing phase transitions.

Chapter 4.. Dynamic renormalization group.

Teaching methodology

In-class work activities

Modality	Name	Typ. Grp.	Description	Hours
Theory classes	Lectures	Large group (G)	Explanation of theoretical concepts by the professor.	17.75
Assessment	Oral presentation	Large group (G)	Oral presentation to the whole class of an assigned problem.	1

At the beginning of the semester a schedule of the subject will be made available to students through the UIBdigital platform. The schedule shall at least include the dates when the continuing assessment tests will be conducted and the hand-in dates for the assignments. In addition, the lecturer shall inform students as to whether the subject work plan will be carried out through the schedule or through another way included in the Campus Extens platform.

Distance education work activities

Modality	Name	Description	Hours
Individual self-study	Autonomous work	The students have to apply the concepts and techniques learned during the lectures to solve assigned exercises, and present the solutions in written form.	56.25

Date of publication: 15/07/2016

Specific risks and protective measures

The learning activities of this course do not entail specific health or safety risks for the students and therefore no special protective measures are needed.

Student learning assessment

Oral presentation

Modality	Assessment
Technique	Objective tests **(non-retrievable)**
Description	Oral presentation to the whole class of an assigned problem.
Assessment criteria	Quality and accuracy of the presented work, as well as the clarity in the oral exposition.

Final grade percentage: 50%

Autonomous work

Modality	Individual self-study
Technique	Papers and projects **(non-retrievable)**
Description	The students have to apply the concepts and techniques learned during the lectures to solve assigned exercises, and present the solutions in written form.
Assessment criteria	Quality and accuracy of the presented work.

Final grade percentage: 50%
